PROFESSIONAL SUMMARY

Data Engineer & Analytics Professional with hands-on experience in building modern data solutions on Azure Cloud. Proficient in developing ETL pipelines using Azure Data Factory and Databricks (PySpark), and transforming raw data into actionable insights with Power BI. With a strong foundation in data modeling and SQL, dedicated to optimizing data workflows and supporting business decision-making through accurate reporting.

PROFESSIONAL EXPERIENCE

Inteliment – Pune, India

April 2025 – Present

- Developed and optimized ETL pipelines using Azure Data Factory, Databricks, and Spark SQL to process and transform large structured datasets from SAP.
- Designed and implemented data models including Star Schema and SCD Type 2 to support efficient analytical reporting and historical tracking.
- Utilized Python and PySpark for scalable data processing, automation, and performance optimization across distributed data environments.
- Delivered analytics-ready datasets and integrated Power BI dashboards, enabling data-driven insights for business and operational teams.

PROJECTS

Vendor Regulation Compliance Dashboard

May 2025 – Sept 2025

- Translated regulatory and compliance requirements from Quality, Legal, and Supply Chain stakeholders into an end-to-end BI roadmap for a centralized vendor regulation compliance monitoring solution.
- Engineered an end-to-end data pipeline by ingesting vendor regulation applicability and documentation data from SAP into BigQuery, using SQL Stored Procedures to cleanse, transform, and model the data into a Star schema designed for compliance analytics.
- Developed and deployed a Power BI dashboard tracking total applicable regulations per vendor with status breakdowns for flagged vs. not flagged, documents uploaded vs. not uploaded, and compliant vs. non-compliant, and calculating Compliance % as the primary KPI for vendor regulatory health.
- Enabled proactive compliance management by highlighting vendors with low Compliance %, improving audit readiness and reducing procurement delays caused by missing or non-compliant regulatory documentation.

SOB Impact Analysis

Oct 2025 – Present

- Collaborated with Procurement and Finance stakeholders to translate Statement of Business (SOB) pricing requirements into an end-to-end BI roadmap to quantify vendor pricing impact and rate compliance across purchase orders.
- Engineered a robust data pipeline by ingesting PO, pricing, and Goods Receipt (GR) data from SAP into BigQuery, leveraging SQL Stored Procedures to cleanse, transform, and model the data into a Star schema optimized for rate and impact analysis.
- Developed and deployed a Power BI dashboard tracking key KPIs including Effective Rate, Net Rate, Rate Difference, GR Quantity, and GR Value, enabling detailed analysis of pricing performance across POs and vendors.
- Implemented pricing comparison logic to identify the minimum applicable rate per PO and benchmark each PO line rate against it, extending the analysis to vendor-level aggregation to highlight pricing deviations and SOB impact.
- Enabled data-driven procurement decisions by quantifying financial impact of rate differences on GR value, improving pricing governance and supporting vendor negotiations and SOB adherence.

EDUCATION

Fergusson College

Master of Science - Data Science (CGPA-8.75)

Pune,India

Sept 2022 – May 2024

Abasaheb Garware College

Bachelor of Science - Statistics (CGPA-8.91)

Pune,India

Jul 2019 – Jul 2022

TECHNICAL SKILLS

Programming Languages: Python, PySpark

Databases: SQL Server, Snowflake, MySQL

Big Data Technologies: Databricks

Cloud Computing: Azure, ADF, ADLS, Databricks, Snowflake

Data Warehousing: OLAP/ OLTP, ETL, Dimensional modeling, SCD, Star Schema, Snowflake schema, Fact Constellation Schema

Visualization Tools: Power BI, Tableau, Matplotlib, Seaborn, MS Excel

Tools/Methodologies: Git, Power Query, DAX, Data Collection, Data Preprocessing, Data Modeling, Data Visualization
